

## **Wonders of the Solar System - Planet Mars**

Mars is the fourth planet from the Sun and the second-smallest planet in the Solar System. Often referred to as the 'Red Planet' due to the iron oxide prevalent on its surface, which gives it a reddish appearance.

Key Feature: Olympus Mons

Olympus Mons is a colossal shield volcano on Mars. It is the largest volcano in the Solar System, standing at an astounding height of 21.9 km (about 2.5 times the height of Mount Everest above sea level).

# **The Great Gas Giant - Jupiter**

Jupiter is the fifth planet from the Sun and the largest in the Solar System. It is a gas giant with a mass more than two and a half times that of all the other planets in the Solar System combined.

Key Feature: The Great Red Spot

The Great Red Spot is a persistent high-pressure storm in Jupiter's atmosphere, producing winds up to 432 km/h. It is larger than Earth and has been observed continuously for at least 300 years, dating back to the 17th century.
