

Tamil Nadu Survey Department - ISD Workflow

Service Code: 0154 (Involving Sub-Division)

An ISD application is triggered when a land parcel is split into multiple sub-divisions. Unlike NISD applications, ISD applications require a mandatory field inspection and the preparation of a sub-division sketch by the Senior Draughtsman (SD).

Key Characteristics:

- The tracking format is ISD/DISTRICT_CODE/YEAR/SEQUENCE.
- Sum of all proposed sub-divisions must equal the original survey area.
- All joint owners must be present and sign the field inspection report.

SIS Field Visit Guidelines

Scheduling and Protocol:

- The SIS officer must schedule the field visit within 15 working days of application submission.
- Rescheduling Rule: If an SIS officer needs to reschedule or change the date of a field visit, they **MUST** ask the Tahsildar for approval. Only the Tahsildar has the authority to approve field visit date changes.
- Boundary Verification: The officer must verify physical boundaries, check for encroachments, and take GPS coordinates along with photographs.
- Encroachments: If an encroachment is detected, the SIS officer must log a detailed remark and refer the matter to the Deputy Inspector Surveyor (DIS).

Subdivision Sketch & Temporary Numbers

Draughtsman and DIS Roles:

- The Senior Draughtsman (SD) prepares the detailed survey sketch containing the proposed sub-divisions.
- Area Tolerance: The sum of all sub-division extents must equal the parent survey extent within a tolerance of +/- 0.5%.
- Temporary Subdivision Format:

DIS assigns temporary subdivision numbers to proposed parcels using the format: {existing_subdiv}/T{sequence}, e.g., 3/T1, 3/T2, 0/T1.

 - The number before 'T' is the parent subdivision being split (0 if the parent has no prior subdivision).
 - The number after 'T' is a sequence counter.
- Once approved by the Tahsildar, these temporary numbers are converted to final subdivision numbers (e.g., 3/T1 -> 3, 3/T2 -> 4).
